ImpactCORE Bollard

The **ImpactCORE Bollard** is a heavy duty steel solution designed to deliver dependable impact protection in busy industrial, logistics and commercial environments. Built around a 168 mm diameter steel core and baseplate, it provides robust defence for doorways, building corners, loading bays and traffic routes where vehicles and material handling equipment operate in close proximity. Finished in a high visibility powder coat, the bollard combines practical durability with a professional appearance that suits modern warehouse and facility layouts.

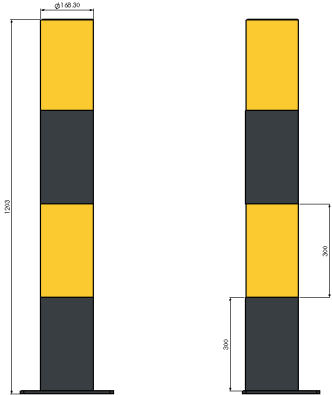

Features and Benefits

- Bolt down bollard with a welded cap that prevents water and dirt traps, ensuring long term durability and protection.
- Powder coated finish in high visibility yellow or yellow and black as standard, with alternative RAL colours and galvanised options available on request.
- 900 mm, 1200 mm and 1500 mm height options.
- Includes 4 No. safety-plus floor anchors.
- 168 mm diameter steel core and galvanised base plate.

Testing

Brandsafe® ImpactCORE bollards are ideal for sites that require strong, reliable protection. Typical applications include segregating vehicle and pedestrian routes, shielding door frames and roller shutters, protecting racking ends, guarding building columns and defining parking or loading zones. Available in three standard heights, they can be used individually or in pairs to create clear, physical boundaries that help prevent costly structural damage and support everyday operational safety.

Material	Mild steel
Height	900 mm / 1200 mm / 1500 mm
Base	298 mm x 242 mm
Diameter	168mm
Steel core finish	Hot dip galvanised (HDG) BS EN ISO 1461
Fixing holes	22 mm diameter
Floor anchors	M12 X 120mm Safety Plus Anchors
